

The difference between Document and Window Objects.

- Document represents any HTML document or web page that is loaded in the browser.and,Window objects represents a browser window or frame that displays the contents of the webpage.
- Document is loaded inside the window.while, Window Objects loaded in the browser.
- All the tags, elements with attributes in HTML are part of the document.and, Global objects, functions, and variables of JavaScript are members of the window object.
- Properties of document objects such as title, body, cookies, etc can also be accessed by a window like this 'window.document.title'.and,Properties of the window object cannot be accessed by the document object.
- Documents is the object of window property.and Window Objects are the object of the browser.
